TABLE OF CONTENTS

TABLE OF CONTENTS (continued)

INTRODUCTION

Purpose

This documentation describes Version 2.0 of the Food and Nutrition Service's Food Stamp Program Operations Study (FSPOS) Data Access System. Developed by Mathematica Policy Research, the system is designed to allow FNS staff possessing a minimum of computer expertise to readily access data collected during the Program Operations Study.

Users are urged to review the documentation in its entirety (including the Appendices) prior to attempting to use the software programs. Those individuals not familiar with the content and structure of the FSPOS data are advised to refer to the following publications:

FOOD STAMP PROGRAM OPERATIONS STUDY - Report on the Census of State Operations: Automated Certifications Systems

FOOD STAMP PROGRAM OPERATIONS STUDY - Report on the Census of State Operations: Claims Collection

FOOD STAMP PROGRAM OPERATIONS STUDY - Report on the Census of State Operations: Computer Matching

FOOD STAMP PROGRAM OPERATIONS STUDY - Report on the Census of State Operations: Monthly Reporting

FOOD STAMP PROGRAM OPERATIONS STUDY - Report on the Census of State Operations: Quality Control

The System Administrator

A large and complex set of software programs and data files like the FSPOS Data Access System requires that an individual be designated as the "keeper" of the software and data. This individual, the System Administrator, has the responsibility for ensuring that users have access to the latest versions of the software. The System Administrator also is responsible for making copies of data files to safeguard against possible hardware failures. The System Administrator, by virtue of their familiarity with the software and data, should also be viewed as the first resource to contact with questions not addressed in this manual.

Please contact FNS for the name of the current System Administrator.

Organization of the Documentation

The documentation begins with a description of the steps required to install the software on your microcomputer. You may disregard the installation section if the software has already been placed on your microcomputer.

The next section presents an overview of the FSPOS Data Access System. The structure of the system, notational conventions in this manual, and the format of the display screens are described.

Instructions for starting the software program are presented next.

The remaining sections are organized by function and provide detailed instructions on the use of the program:

> The Main Menu - describes the options available upon entering the FSPOS Data Access System

> The Data Display Module - provides instructions for displaying data elements or variables on the screen

> The Data Update Module - describes how to change or update individual data elements in the system. Please note that for data integrity reasons, this module may not be available to all users of the software. Consult your System Administrator if you have additional questions.

> The Standard Report Module - provides instructions for obtaining frequently requested printed reports

> The Ad Hoc Reporting Module - describes the steps required to select data elements for use with Relational Report Writer, a separate, commercially-available software package designed to simplify the creation of customized reports

> The Maintenance Module - provides instructions for making backup copies of the data files, retrieving copies of the data files, and monitoring updates to individual data elements. Please note that for data integrity reasons, this module may not be available to all users of the software. Consult your System Administrator if you have additional questions.

The final section describes what to do in the event that you make an error or if the system produces an error message.

Appendices

Appendix A is the Data Dictionary, which contains a complete list of data elements in the FSPOS Data Access System. The system will require that you frequently refer to this list in order to provide the name or identification number of the desired data element.

Appendix B provides identifying information for specific systems in multi-system states. The names and display order, by state, are provided for each system.

Appendix C provides instructions on the use of Friendly Finder, a keyword search program which simplifies the use of the Data Dictionary.

Appendix D presents a discussion of the use of the Relational Report Writer software package.

Hardware and Software Requirements

Operation of this software assumes that it will be used on a microcomputer with the following characteristics:

1) MS DOS 2.0 or later
2) 640K memory
3) Hard disk
4) Either a monochrome or color monitor
5) dBase III Plus software

PLEASE NOTE: The program may not operate in a satisfactory manner on some systems with composite B&W monitors.

Acknowledgments

The FSPOS Data Access System software was developed by Richard Lieberman and David Edson. The dBase data files were prepared by Esther Miller and Linda Wray. The Keyword Descriptors were created by Linda Wray. This documentation was written by David Edson with the assistance of Linda Wray and Esther Miller.

INSTALLING THE SOFTWARE

The software for the program and data files (not including dBase III) reside in over 100 separate DOS files which require approximately 700KB of storage. The programs and data files must be copied onto a hard disk prior to use and are provided in the following formats:

> 1) 5 and 1/4 inch, 360KB diskette
> 2) 3 and 1/2 inch, 720K diskette

The programs and data files are supplied as a set of five diskettes. The diskettes are labeled:

> FSPOS Program Disk
> FSPOS Data Disk
> FSPOS RR#1
> FSPOS RR#2
> FSPOS Friendly Finder

Installation of the software requires you to do the following:

1) Set PATH

The PATH command is a DOS command which causes specified subdirectories to be searched for commands or files that are not found in the user's current directory. Since the Access System software requires the use of dBase files, the path must be set for the subdirectory containing dBase III. You may check the list of directories currently contained in the path by typing:

> PATH

If the subdirectory containing dBase III is not listed, you may set the path by typing:

> PATH \sub

where \sub is the name of the subdirectory containing dBase III.

2) Set the Default Drive

The installation software will automatically create the subdirectories the FSPOS Data Access System requires. However, before actually installing the software, you must decide which drive you wish to install the software on and make that drive the default drive. For instance, if you wish to place the FSPOS software and data on the C: hard disk, type "C:" at the DOS prompt.

3) Install the Software on the Hard Disk

The software diskettes contain batch files which simplify installation of the software and data on the user's hard disk. Before starting, make sure that your DOS prompt shows that you at the desired default drive.

3.1) Install the FSPOS Programs (Required)
Start the installation process by inserting the disk labeled "FSPOS Program Disk" into the A: drive. Type:

A:INSTALL <Return>

Several messages will appear on the screen as the installation is taking place. The system will produce a beep and present another message when the installation of the programs has been completed.

3.2) Install the FSPOS Data (Required)
After the programs have been installed, insert the "FSPOS Data" disk in the A: drive and type:

A:INSTALL <Return>

3.3) Install Relational Report Writer (Optional)
You must install Relational Report Writer (RR) if you wish to use RR to produce ad hoc reports. Both RR diskettes must be installed. Start the installation by placing the disk labeled "FSPOS RR#1" in the A: drive and type:

A:INSTALL <Return>

After the first RR disk is installed, place the disk labeled "RR#2" in drive A: and type:

A:INSTALL <Return>

3.4) Installing Friendly Finder (Optional)
If you wish to use the Friendly Finder software package in either standalone or memory-resident mode, place the disk labeled "FSPOS Friendly Finder" in the A: drive and type:

A:INSTALL <Return>

AN OVERVIEW OF THE FSPOS DATA ACCESS SYSTEM

Structure of the Access System

The Food and Nutrition Service's Food Stamp Program Operations Data Access System is a menu-oriented software package designed to allow convenient access to Program Operations data for FNS staff who possess a minimum of computer expertise. The software is written in the dBase III programming language. Data is stored in dBase III format.

The software system is comprised of several major components:

1) Data Display Module - This module allows you to select and display information stored in the Access System database.

2) Update Module - This module allows you to modify information stored in the Access System database.

3) Standard Reports - This module provides a convenient mechanism for obtaining frequently requested printed reports.

4) Ad Hoc Reports - This module provides an mechanism for obtaining customized reports without having to write dBase programs.

5) Maintenance - This module simplifies maintenance of the Access System data base by providing you with several utility programs. The programs provide for file backup and reconstruction of data files destroyed by equipment failures or user error.

Each of the modules and their functions are accessed through a series of menus. The relationships of these menus to each other are summarized in Figure 1.

Notational Conventions

The following notational conventions are used in this manual:

KEY NAMES

The names of the keys referred to in this manual are those printed on the IBM Personal Computer key tops. If you are using a different machine, these keys may have slightly different names.

REGULAR KEYS

Keys which are to be pressed by the user are surrounded by "<" and ">". For example, the user would press the "C" key when the computer screen contains the message:

Press <C> to continue

SPECIAL KEYS

Keys which are unique to computers are surrounded by "[" and "]". For example, the user would press the key labeled "PgDn" when the computer screen contains the message:

Press [PgDn] for next screen

Basic Features of Screens

1. Screen Formats

The screens displayed in the system share several common features. At the upper right corner is the date. The rest of the screen is outlined with a double box, and carries the title, "Food Stamp Program Operations Study Data Access System." Under this title is the top separator line. At the lower part of the screen is the bottom separator line. On most screens, the area under this bottom separator line will indicate what is expected from the user.

The area between the two separator lines is the main body of the screen. The light bar menus will appear here. You may use the arrow keys to highlight each of the possible menu choices. A description of the highlighted choice will also appear on the screen. A selection is made by pressing the return key when your choice is highlighted. Highlighting is also used to indicate input fields. When you are asked to enter information, the area you are to type into will appear in reverse video, as will the information you enter. The cursor, a short underline, indicates where the character you type will appear. Informational displays, which you cannot type over, appear in standard video.

2. Special Keys

This section describes how several of the special keys on the IBM PC keyboard are used in the system.

ARROW KEYS

The arrow, or cursor control, keys are located on the numeric keypad on the right side of the keyboard. These keys are referred to in this manual as the "arrow" keys and may be used to move the cursor up, down, to the right, or to the left. In general, the cursor moves in the direction of the arrow, but there are some differences.

Left Arrow: The cursor will move back one character within an input field, but will not exit that field after the last character.

Up Arrow: The cursor will move directly to the previous input field.

Right Arrow: The cursor will move forward one character within an input field, and will move to the next input field after the last character.

Down Arrow: The cursor will move directly to the next input field.

THE RETURN KEY - <Return>

The "Return" or "Enter" key is labeled with a bent arrow and is located in the same position as the carriage return on a standard electric typewriter keyboard. The Return key is often called the Enter key, because when you have finished typing a data item, you press the Return key to enter the data and move to the next input field. For example, the user would press this key when the computer screen contains the message:

Press <Return> to continue

THE SHIFT KEY - [Shift]

The Shift key works just like the shift key on an ordinary typewriter.

THE CONTROL KEY - [CTRL]

The [Ctrl] key is on the left of the keyboard directly above the [Shift] key, and works in a manner similar to the [Shift] key. That is, the [Ctrl] key does not work alone, but when pressed at the same time as another key it changes that key's meaning.

[Ctrl][W] and [Ctrl][w] are used to exit from the data screens. When you are finished entering or editing data, simply press the [Ctrl] and [W] keys together. The screens carry reminders of the functions of the important special keys, so it is not necessary to memorize them all.

THE BACKSPACE KEY

The Backspace key is similar to the Left Arrow key, but with one important difference. Located above the Return key, the backspace key moves the cursor one character to the left, erasing what was there previously.

THE INSERT AND DELETE KEYS - [Ins], [Del]

The Insert and Delete keys, at the bottom right of the keyboard, are used, as their names suggest, to insert and delete characters. The [Ins] key acts as a toggle switch. Press the key once to activate insert mode, press again to return to overtype mode. In insert mode, existing text will move to the right as you type new characters, while in overtype mode the existing characters will be replaced by the new text. Pressing the [Del] key will cause the character at the cursor to be erased and will move the rest of the characters to the left to replace it.

STARTING THE PROGRAM

WARNING - Memory Resident Software

Unpredictable results may occur when using the Food Stamp Program Operations Study Data Access System with memory resident software such as SideKick(tm) or Metro(tm). IF YOU EXPERIENCE ANY UNUSUAL PROBLEMS OR ERROR MESSAGES, REMOVE ANY MEMORY RESIDENT SOFTWARE.

Starting the Program

Before starting the program, you should make \access the default directory by typing:

cd \access

To start the program, type:

FNS <return>

The message "TRLIB -S -M48000" will appear briefly on the screen. This is part of the bookkeeping or overhead which is required for the program to work.

Next, you will be presented with the familiar dBase III license screen. After responding in an appropriate manner (i.e., press the return key), the first screen from the Access System appears.

THE MAIN MENU

THE MAIN MENU

You are initially presented with the Main Menu, shown below. This light bar menu provides access to the main modules of the Access System and allows you to leave the Access System for either the dBase dot prompt or for DOS.

THE DATA DISPLAY MODULE

THE DATA DISPLAY MENU

In order to review information contained in the Access System database, you must specify which of the items or variables are to be displayed and must specify a criteria for display.

The Access System contains routines which allow you to specify combinations of items from the FSPOS census and survey which are to be displayed. The Access System also contains routines which allow you to specify the jurisdictions for which selected items should be displayed. Finally, other routines provide for the display of the items on the computer screen.

Selection of these routines is obtained through the DATA DISPLAY MENU shown below.

```

SELECTING DISPLAY ITEMS

You may specify items for display by providing either the variable name or variable number. The name and number of each variable is contained in the Data Dictionary (Appendix A).

Instructions for entering the name or number are contained in the lower part of the screen shown below. The number, name, and description of each selected item is displayed in the center portion of the screen. Up to 10 items may be specified on each screen. When the desired items have been identified, you may exit by first pressing and holding the [Ctrl] key and simultaneously pressing the <W> key.

SELECTING DISPLAY CRITERIA

You must identify the jurisdictions for which the desired items will be displayed. Jurisdictions are selected using the DISPLAY CATEGORY MENU shown below.

You may select the desired state or FNS region to be displayed from the menus shown below. You also have the option of selecting all states for display. If item "C) ALL STATES (by FNS Region)" is selected, values for each state will be displayed grouped by FNS Region.

```

STATE SELECTION MENU

You may select any combination of up to nine states for display. States are selected by using the arrow keys to move the cursor to the desired state and then pressing the <space bar> to toggle the selection on or off. A cross-hatch symbol will appear next to each state which has been selected for display. To remove the cross-hatch symbol, just press the <space bar> again.
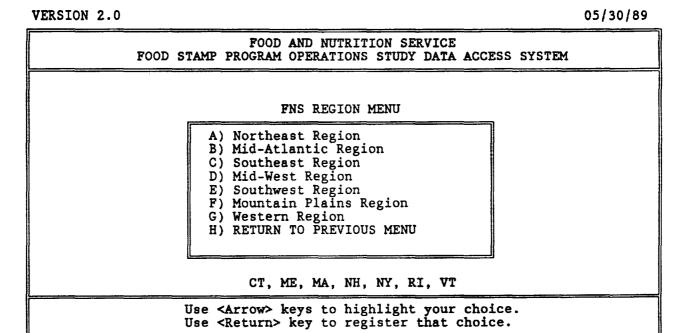

Press [Ctrl][W] when the desired states have been selected. You will be asked to confirm your choice before returning to the DATA DISPLAY MENU.

FNS REGION MENU

If you selected option "B) FNS Regions" from the Display Category Menu, the FNS REGION MENU will appear. Move the menu bar to select the desired region for display. The states are organized by FNS region. As you move the menu bar, the message line at the bottom of the screen will display the states which are included in each region (in this example, the Northeast Region).

DISPLAYING THE SELECTED ITEMS

Once the data items and display criteria have been selected, the data may be displayed on the screen. Selecting "C) DISPLAY VARIABLES ON SCREEN" from the DATA DISPLAY MENU starts the data retrieval/display process. A message screen, shown below, will keep you informed of the processing which is taking place as the system gathers the requested data from the FSPOS data base. The variable and state which are currently being worked on are displayed.

DATA DISPLAY SCREEN

After all the requested data are retrieved, the information is displayed on the screen. An example screen is shown below.

The beginning and end of the display data is noted on the screen. In the event that the data requires more than one screen in order to be displayed, you may "scroll" the display up or down using the [↑], [↓], [PgUp], or [PgDn] keys. Press [E] to return to the DATA DISPLAY MENU.

A special Help Menu is also available to assist in deciphering special codes which may be displayed. Pressing the [F1] function key will display the help screen, which is also shown below. Press [E] to return to the Data Display screen.

THE DATA UPDATE MODULE

THE DATA UPDATE SCREEN

The Data Update Module allows you to alter information contained in the FSPOS Access System data base. After selecting the Update Module choice from the MAIN MENU, you are presented with the Data Update screen shown below. This screen is similar to the Data Selection screen in the Data Display module in that you are asked to provide the variable name or variable number for the data element which is to be modified. The variable number and name is contained in the Data Dictionary in Appendix A.

VERSION 2.0   **05/30/89**

```

Once you have specified which report you would like printed, the system will start to gather and organize the necessary data. A message screen showing the system is "Working..." will appear as the report is being prepared. This process may take several minutes for larger reports.

When the report is ready for printing, the user will be asked to prepare the printer (see below). Printing will begin when you press [P]. You may return to the MAIN MENU without printing by pressing [E]. In the event of a printer error, you will be given an opportunity to correct the printer error and try printing again.

THE AD HOC REPORT MODULE

AD HOC REPORTS

To assist in the preparation of special custom or "ad hoc" reports, the FSPOS Data Access System simplifies the preparation of special data files which may, in turn, be used by a commercially-available reporting package, Relational Report Writer.

You will be asked to specify the data items which you would like in your ad hoc report. The process used to select the data items is identical to that used in the Data Display Module. The selection process is started by choosing item "A) SELECT VARIABLES FOR EXTRACTS" on the AD HOC REPORT MENU.

VERSION 2.0   05/30/89

```
+-------------------------------------------------------------------+
|                   FOOD AND NUTRITION SERVICE                      |
|        FOOD STAMP PROGRAM OPERATIONS STUDY DATA ACCESS SYSTEM      |
+-------------------------------------------------------------------+
|                                                                   |
|                                                                   |
|                                                                   |
|                      AD HOC REPORT MENU                           |
|            +------------------------------------------+           |
|            | A) SELECT VARIABLES FOR EXTRACTS         |           |
|            | B) CREATE AD HOC EXTRACTS                |           |
+-------------------------------------------------------------------+
```

Once the data items have been identified, the data must be prepared for use by Relational Report Writer. Selection "B) CREATE AD HOC REPORTS" on the AD HOC REPORT MENU will create a set of data files, organized by subject area. The data for all states for the selected variables will be contained in these files. A message screen will appear informing you that the processing is taking place. Please note that for reports with a large number of variables, the processing may take several minutes. When all the data extracts are created, you will be returned to the AD HOC REPORT MENU.

After the data extracts are created, you may use Relational Report Writer to produce your custom report. Exit the FSPOS Data Access System by choosing "C) EXIT TO DOS FOR AD HOC REPORT". An instruction screen, shown below will tell you how to start the Relational Report Writer Program and how to reenter the FSPOS Data Access System.

A brief set of instructions on using Relational Report Writer are contained in Appendix D to this manual. More detailed instructions are contained in the Relational Report Writer manual.

THE MAINTENANCE MODULE

MAINTENANCE MENU

The Maintenance Module simplifies maintenance of the FSPOS Data Access System by providing the user with several utility programs. These programs may be used to make backup copies of the data files and, in the event of hardware failures and loss of data, retrieve the backed-up data. Another program allows the System Administrator to review all the changes made to the data.

When "E) SYSTEM MAINTENANCE" is selected from the MAIN MENU, the MAINTENANCE MENU, shown below, will appear. You may select the desired function by moving the menu bar with the cursor keys. A brief description of each function will appear on the message line.

You will next be asked to describe the backup device you intend to use. The system needs this information in order to estimate the number of diskettes required by the backup data. If more than one diskette is required, you will be told so and given the opportunity to exit from the backup process.

If only one diskette is required, the backup process will begin. A message screen informing you that the process is taking place will appear.

RESTORE DATA FILES

When "B) RESTORE DATA FILES" is selected from the MAINTENANCE MENU, you will be asked to supply the drive designation for the device from which you wish to restore data. Supply the drive letter and press [Return]. Usually, you will be using the "A" drive for backup. If your computer is attached to a network, the designation may be different.

Once you make your selection, a message screen informing you that the Restore process is taking place will appear. After all data is restored from the diskette, you will be asked if a second diskette contains additional data to be restored. If so, replace the first backup disk with the second and press [Y]. Otherwise, press [N] to return to the MAINTENANCE MENU.

PRINT HISTORY FILE

The FSPOS Data Access System maintains a record of modifications made using the Data Update Module. Information on the original value, the new value, and the location of each modification is stored in a special data file. The contents of this data file may be printed by selection "C) PRINT HISTORY FILE" from the MAINTENANCE MENU.

After making this selection, you will be asked to prepare the printer (see below). Printing will begin when you press [P]. You may return to the MAIN MENU without printing by pressing [E]. In the event of a printer error, you will be given an opportunity to correct the printer error and try printing again.

IF SOMETHING GOES WRONG

IF SOMETHING GOES WRONG

The FSPOS Data Access System has been designed to be as error-free as possible. However, in the event that something unexpected occurs, you should be aware that <u>it is very unlikely that data or software programs will be destroyed.</u>

Hardware Failures

The most likely, though rare, cause of problems will be the result of hardware failures. If this occurs, the software may be reinstalled and the most recent version of the data retrieved from backup copies.

Total Confusion

If, during the course of specifying data elements, preparing reports, or performing other functions, you become totally confused and want to start over, you may do so by following the instructions on the screen to return to the previous menu. You may continue to do this until you reach the MAIN MENU, where you may choose to continue using the FSPOS Data Access System or exit to either dBase III or DOS.

You may also start over again from the very beginning by rebooting your system. This should not cause any problems except when using the DATA UPDATE module. To prevent possible corruption of the data, you should follow the instructions on the screen to exit.

Starting the FSPOS from dBASE III

When the FSPOS Data Access System is started from DOS using the "FNS" command, the system performs several "overhead" functions prior to loading dBASE and the FSPOS software.

If you entered dBASE III by selecting the "Exit to dBase" option from the MAIN MENU, these overhead programs are still present and you may reenter the FSPOS Data Access System by typing "DO FNSMAIN".

If you entered dBASE III directly from DOS, you must return to DOS (use the "QUIT" dBASE command) and start the FSPOS system in the normal manner (type FNS at the DOS prompt).

"Cancel, Ignore, Suspend"

The dBASE III error message may appear if you have not started the FSPOS Data Access System properly (see the discussion immediately above).

If the error message appears in the middle of an otherwise normal session, please write down all the information which appears on the screen and inform the System Administrator of the problem. There may be an error in either the data or the software.

INCLUDES KEYWORDS

SUBJECT	VARIABLE ID NUMBER	VARIABLE NAME	MODULE NUMBER	CONSTRUCT	KEYWORD
ACS	3	CLASS86	15	T	CLASSIFICATION OF STATE'S ACS IN 1986 BY DETERMINATION AND PROCESSING MODES
	4	ID_NUM	0	F	UNIQUE CENSUS INSTRUMENT IDENTIFYING NUMBER
	5	JURISD_A	15	T	NAME OF ACS LOCAL OFFICE
	11	Q1002	10	T	RATIO OF NUMBER OF ELIGIBILITY WORKERS TO NUMBER OF AVAILABLE TERMINALS
	12	Q1002ELG	10	F	NUMBER OF ELIGIBILITY WORKERS IN AREA SERVED BY JURISDICTION'S ACS
	13	Q1002TRM	10	F	NUMBER OF WORKER-USED TERMINALS IN AREA SERVED BY JURISDICTION'S ACS
	15	Q101_A	1	T	FULL NAME OF JURISDICTION'S AUTOMATED CERTIFICATION SYSTEM
	16	Q102_MO	1	F	MONTH THE JURISDICTION'S AUTOMATED CERTIFICATION SYSTEM FIRST IMPLEMENTED
	17	Q102_YR	1	F	YEAR THE JURISDICTION'S AUTOMATED CERTIFICATION SYSTEM FIRST IMPLEMENTED
	18	Q103_ACS	1	F	PERCENT OF STATE'S FOOD STAMP CASELOAD HANDLED BY JURISDICTION'S ACS
	22	Q1100A	11	F	FREQUENCY THAT WORKER RECEIVES ACS-GENERATED CASE ACTION EDIT PROBLEM REPORTS
	23	Q1100B	11	F	FREQUENCY WORKERS RECEIVE OUTSTANDING VERIFICATION ACTION REPORTS
	24	Q1100C	11	F	FREQUENCY WORKERS RECEIVE PENDING ACTIONS DUE REPORTS
	25	Q1100D	11	F	FREQUENCY WORKERS RECEIVE AUTOMATED ELIGIBILITY DETERMINATION RESULT REPORTS
	26	Q1100E	11	F	FREQUENCY WORKERS RECEIVE COMPUTER MATCH RESULTS REPORTS
	33	Q1103	11	F	SYSTEM GENERATES REGULAR SUMMARY REPORTS FOR ELIGIBILITY UNIT SUPERVISORS
	34	Q1104A	11	F	SYSTEM GENERATES CERTIFICATION PERIOD EXPIRATION NOTICES
	35	Q1104B	11	F	SYSTEM GENERATES HOUSEHOLD APPOINTMENT NOTICES
	36	Q1104C	11	F	SYSTEM GENERATES OUTSTANDING VERIFICATION REQUIREMENT NOTICES
	37	Q1104D	11	F	SYSTEM GENERATES MONTHLY REPORTING NOTICES
	38	Q1104E	11	F	SYSTEM GENERATES MONTHLY REPORTING FORMS
	39	Q1104F	11	F	SYSTEM GENERATES FAILURE-TO-FILE MONTHLY REPORT WARNINGS
	40	Q1104G	11	F	SYSTEM GENERATES TERMINATION NOTICES FOLLOWING FAILURE TO FILE MONTHLY REPORTS
	41	Q1104H	11	F	SYSTEM GENERATES APPROVAL/DENIAL REPORTS BASED ON APPLICATION ACTION
	42	Q1104I	11	F	SYSTEM GENERATES INTERIM/RECERT CHANGE BENEFIT REDUCTION/TERMINATION NOTICES
	43	Q1200	12	F	GENERIC WORKERS HANDLE AFDC AND FOOD STAMP CASES FOR PA HOUSEHOLDS
	44	Q1201	12	F	JURISDICTION USES COMBINED APPLICATION FORM FOR AFDC AND FOOD STAMP CASES
	45	Q1202	12	F	WORKER USES SINGLE INPUT FORM FOR AFDC/FOOD STAMP INTAKE/RECERTIFICATION ACTIONS
	46	Q1203	12	F	WHERE ON COMBINED INPUT FORM DATA RELEVANT TO BOTH AFDC AND FSP ARE ENTERED
	47	Q1204	12	F	HOW CASELOAD REPORTS PRESENT DATA ON COMBINED AFDC/FSP HOUSEHOLDS
	48	Q1301	13	F	AVERAGE MONTHLY NUMBER IN 1985 OF FSP PARTICIPATING HOUSEHOLDS
	49	Q1302AB	13	T	RATIO OF NUMBER OF FULL-TIME EQUIVALENT CASEWORKERS TO ELIGIBILITY SUPERVISORS
	50	Q1302AC	13	T	RATIO OF NUMBER OF FULL-TIME EQUIVALENT CASEWORKERS TO CLERICAL WORKERS
	51	Q1302_CS	13	F	1985 AVERAGE MONTHLY NUMBER OF FULL-TIME EQUIVALENT ELIGIBILITY UNIT CLERICALS
	52	Q1302_ES	13	F	1985 AVERAGE MONTHLY NUMBER OF FULL-TIME EQUIVALENT ELIGIBILITY SUPERVISORS
	53	Q1302_EW	13	F	AVERAGE MONTHLY NUMBER IN 1985 OF FULL-TIME EQUIVALENT ELIGIBILITY WORKERS

SUBJECT	VARIABLE ID NUMBER	VARIABLE NAME	MODULE NUMBER	CONSTRUCT	KEYWORD
ACS	54	Q1303	13	F	AVERAGE ANNUAL SALARY IN 1985 FOR FULL-TIME EQUIVALENT ELIGIBLITY WORKER
	55	Q1304	13	F	RATIO OF FRINGE BENEFITS TO DIRECT SALARY COSTS FOR ELIGIBILITY WORKERS
	56	Q1305APP	13	F	1985 TOTAL INITIAL APPLICATIONS/REAPPLICATIONS PROCESSED (INCLUDES EX SERVICE)
	57	Q1305EXP	13	F	1985 TOTAL NUMBER OF EXPEDITED SERVICE APPLICATIONS PROCESSED
	58	Q1305INT	13	F	1985 TOTAL NUMBER OF INTERIM ACTIONS PROCESSED
	59	Q1305REC	13	F	1985 TOTAL NUMBER OF RECERTIFICATIONS PERFORMED
	60	Q1306	13	F	1985 PERCENT OF INITIAL APPLICATIONS APPROVED
	61	Q1307	13	F	1985 PERCENT OF RECERTIFICATIONS APPROVED
	62	Q1308	13	F	1985 TOTAL NUMBER OF TERMINATIONS OF PARTICIPATING HOUSEHOLDS
	63	Q1309	13	F	PERCENT OF TERMINATIONS DUE TO NONAPPEARANCE FOR RECERTIFICATIONS
	65	Q1400ABR	14	F	BURROUGHS HARDWARE IS USED FOR CENTRAL PROCESSING OF FOOD STAMP TRANSACTIONS
	66	Q1400ACD	14	F	CONTROL DATA HARDWARE IS USED FOR CENTRAL PROCESSING OF FOOD STAMP TRANSACTIONS
	67	Q1400ADG	14	F	DIGITAL HARDWARE IS USED FOR CENTRAL PROCESSING OF FOOD STAMP TRANSACTIONS

APPENDIX C:

Friendly Finder and Keyword Search

FRIENDLY FINDER AND KEYWORD SEARCH

Friendly Finder is a memory-resident software package which assists in the retrieval of information. The software will:

- allow you to search the data dictionary file for a variable name or number, and then use that name or number in the FSPOS Data Access System

- allow you to search the data dictionary and identify variables with specific keywords and phrases in their descriptions

- provide a convenient cross-reference with the published tables by searching for where a variable is used in the published tables and provide a list of variables used in a published table

Using Friendly Finder:

Friendly Finder may be used as either a standalone program or as part of the FSPOS Data Access System. In standalone mode, you start the program by typing the necessary start command from the DOS prompt. When used in conjunction with the FSPOS Data Access System, the software will be loaded prior to starting the Access System. Friendly Finder will remain hidden in the computer ("Memory Resident") until you specifically tell your computer you want to use it. By pressing a special combination of keys, work on the Access System will be temporarily interrupted and the Friendly Finder program will appear. You may then use Friendly Finder as long as you wish. When you exit Friendly Finder, you will be returned to exactly the same spot you were in when you left. You may "tag" information to bring back with you when you reenter the Access System.

Brief instructions on using Friendly Finder in both modes are presented below. More complete instructions are contained in the Friendly Finder user documentation.

Standalone Mode:

Prior to starting Friendly Finder from the DOS prompt, change the default directory to \access or set the path to include \access. This will ensure that your system will successfully locate the Friendly Finder software and the necessary data files.

Once your default directory is set properly, type:

ffind <Return>

Friendly Finder will start by displaying a few brief messages and then place you in the USER MENU.

The USER MENU contains a list of two available databases. The first, labeled "FNS Access System Dictionary" contains information on only those variables included in the Access System data files. "Full-XREF" contains information on all the variables collected during the FSPOS project. The information about each variable is the same in each database with the exception of one variable in "Full-XREF". The additional variable indicates whether the variable is included in the Access System.

Move the cursor up or down and press [Enter] to select the desired data file. An empty box will appear on the screen. Each column in the box represents a field which describes some characteristic of the data items collected during the FSPOS project.

C - 2

Use the tab key to move to the desired field and start typing the string you want to search for. As you type, the software will start to search the data base and will list the "closest" match at the top of the box, with "less likely" matches displayed below.

As you type, you may see the contents of the box change as the search algorithm reorders the "matches". If you would like to the restrict the search to include only those items which match exactly what you type for a particular field, you may "pin" the search string for the field by pressing the [+] key at the right of the numeric keypad on your keyboard.

If you have any difficulties, the context-sensitive help facility is available by pressing [F1].

Leaving Friendly Finder

When you are ready to leave Friendly Finder, press [Esc] to return to the USER MENU. Press [Esc] again to return to the MAIN MENU. Press [E] to exit Friendly Finder and return to the DOS prompt.

Using Friendly Finder in Conjunction with the Access System:

Friendly Finder is started each time you enter the Data Access System. When you type "FNS" to start the Access System, Friendly Finder is first loaded into "background" for later use. The Access System software is then started. At anytime during your Access System session, you may temporarily interrupt processing and start Friendly Finder by pressing:

[Ctrl][Right Shift]

Search/selection is performed in the same manner as in standalone mode. If you wish to automatically pass data to the FSPOS Data Access System, move cursor to desired row and column. Then press [Ctrl][Enter] and you will automatically leave Friendly Finder, return to the location in the Access System, and the contents of the row and column will appear on the screen just as if you actually typed the characters. You may then continue normally with the FSPOS Data Access System session.

APPENDIX D

Relational Report Writer

RELATIONAL REPORT WRITER

Relational Report Writer (RR) is a commercially-available software package which simplifies the creation of custom reports from data stored in dBase III. Instead of programing reports using the dBase programming language, you may design your report on the computer screen by freely moving text and the location of your data until you are satisfied with the report layout. You may preview the resulting report, make adjustments, and then print the report.

The FSPOS Data Access System contains several hundred data fields in over a dozen separate physical data files. By using the Data Access System to specify the fields to be included in a custom report and then using RR to produce the report, you will be able to create a printed report from the FSPOS data base without having to learn the intricacies of the dBase programming language and without having to determine the exact physical location of each data field you want to use in your report.

Defining the Data to Use in Your Report

As described above, you may use the FSPOS Data Access System to identify the data fields you wish to use in your custom or "ad hoc" report. After selecting "D) Ad Hoc Reports" from the Access System MAIN MENU, you will be asked to identify the variables which you wish to include in your report. After all the variables have been identified, you will be asked to prepare the data for use by RR. The Access System will automatically retrieve the data fields you specified and create a series of smaller, related data files.

Data Relations

The concept of data relations is important in the understanding and use of the Access System and RR. dBase limitations prevent the storage of all data in a single, very large data file. In addition, differences in the units of observation for some of the data elements suggest that it would be inefficient to try to store all the data together. As a result, the Access System data is stored across several physical data files, with files grouped by subject area. For example, there is one set of data files which contain Quality Control data and another set which contains Monthly Reporting data. The common virtue of these sets is that each data observation contains information about a single state. If two separate physical data files have the same value for the state variable, they represent the same state. Thus, information from the two subject areas may be "linked" or "related" to each other using the state variables as the linking "key". When the "key" variables are unique in each data file, a "one-to-one" relation exists. In the Data Access System, this is the case for the Monthly Reporting, Quality Control, and Claims (Census) subject areas. There is one, and only one, observation for each state.

The other subject areas, Computer Matching, for instance, use systems within states as the unit of observations. For example, there are several systems, and thus observations, used for Computer Matching in California. Data with unique observations may still be "linked" or "related" to the Computer Matching data using state as the key. A relation such as Quality Control (unique observations for state) to Computer Matching (multiple observations for state) are referred to as "one-to-many" relations.

The RR Data Files

The Access System will create an extract data file for each subject area. Observations in each subject area file will contain a state code and the data fields you specified. When you exit the Access System and start RR, you will be asked whether you want to create a new report or select an existing report setup. The "DEFAULT" report uses a dummy data file containing state information as the main or central database. This dummy file should be related or linked to the Access System extract files using state as the key. You may set the relationships between the files by pressing "/DR". Selecting the "SCAN" option allows for "one-to-many" relationships. Pressing [F10] will display a picture showing the relations and contents of the extract files. Consult the RR documentation for complete instructions.
